

Download Eating Well With Kidney Failure Class

Health

Chronic kidney disease (CKD), also known as chronic renal disease, is a condition that occurs when your kidneys don't work as well as they should to filter waste, toxins and excess fluid from your body. Stage 5 kidney disease, also known as end stage renal disease (ESRD), indicates kidney failure, eGFR of 15–29. View ckd stage 5 symptoms and treatment options. Introduction. With peritoneal dialysis (PD), you have some choices in treating advanced and permanent kidney failure. Since the 1980s, when PD first became a practical and widespread treatment for kidney failure, much has been learned about how to make PD more effective and minimize side effects. Proteinuria is a condition in which urine contains an abnormal amount of protein. The term albuminuria is also often used because some tests measure this protein specifically and it is the major type of protein in the urine.
