Probability is the branch of mathematics that studies the possible outcomes of given events together with the outcomes' relative likelihoods and distributions. In common usage, the word "probability" is used to mean the chance that a particular event (or set of events) will occur expressed on a linear scale from 0 (impossibility) to 1 (certainty), also expressed as a percentage between 0 and 100%. Our probability of rolling any of the numbers is $\frac{1}{6}$. The probability of rolling a 2 is $\frac{1}{6}$, of rolling a 3 is also $\frac{1}{6}$, and so on. Let's try another problem.
